Learn more about single-bolus TNKase® (tenecteplase) acute myocardial infarction treatment and the 5-second TNKase® dosing and administration. Please see full Prescribing Information for additional important safety information.

TNKase® Acute Myocardial Infarction Treatment
The use of anticoagulants and antiplatelet agents has largely increased. Diagnostic lumbar puncture in patients taking these drugs represents a challenge considering the opposing risks of bleeding and thrombotic complications. To date there are no controlled trials, specific guidelines, nor clear ...

Thromboembolic events are among the major causes of mortality and morbidity. 1 To decrease the incidence of such events, physicians prescribe one or more antithrombotic medications for patients at risk. These medications include antiplatelet agents, fibrinolytic drugs and anticoagulants. 1 Patients taking antithrombotic agents occasionally require minor oral surgery.

Should Antiplatelet and Anticoagulant Medications Be ...
2/8 Indications Therapeutic (because of rapid onset of action) • DVT/PE • ACS Prophylactic • DVT/PE prophylaxis o Surgery, esp. orthopaedics o Immobile paties nt • Extracorporeal circuits (cardiopulmonary bypass, haemodialysis) Mechanism of action Pentasaccharide sequence: binds to natural antithrombin-III and accelerates breakdown of factor Xa 1000-fold.

Reperfusion therapy is a medical treatment to restore blood flow, either through or around, blocked arteries, typically after a heart attack (myocardial infarction (MI)). Reperfusion therapy includes drugs and surgery. The drugs are thrombolytics and fibrinolytics used in a process called thrombolysis. Surgeries performed may be minimally-invasive endovascular procedures such as a percutaneous ...

x Right ventricular (RV) dysfunction is a well-known prognostic factor in several cardiac diseases. However, the prevalence of RV dysfunction in hypertrophic cardiomyopathy (HC) is unclear and its prognostic value is unknown. This study aims at addressing these issues assessing RV function with speckle tracking echocardiography.

American Journal of Cardiology Home Page
This term refers to the death of a certain segment of the heart muscle (myocardium), usually the
result of a focal complete blockage in one of the main coronary arteries or a branch thereof. The main cause of myocardial infarction is atherosclerosis in the coronary arteries.
