**VIMOS - Embedded image processing**
An embedded system is a controller programmed and controlled by a real-time operating system (RTOS) with a dedicated function within a larger mechanical or electrical system, often with real-time computing constraints. It is embedded as part of a complete device often including hardware and mechanical parts. Embedded systems control many devices in common use today.

I would like to send a Excel chart in the body of an email (Outlook) (not as attachment) from VB, anyone know how to do this? Solved: Just to add a bit more detail to answer below you'll need the following (could do with some improvement).

**outlook - How to send an embedded image in email from ...**
The review embargo is finally over and we can share what we found in the Nvidia Jetson TX2. It’s fast. It’s very fast. While the intended use for the TX2 may be a bit niche for someone ...

**Hands-On Nvidia Jetson TX2: Fast Processing for Embedded ...**
An embedded operating system is an operating system for embedded computer systems. This type of operating system is typically designed to be resource-efficient and reliable. Resource efficiency comes at the cost of losing some functionality or granularity that larger computer operating systems provide, including functions which may not be used by the specialized applications they run.

Ignitarium is a product engineering design house that has vast experience in AI, imaging and signal processing-intensive implementations on NVIDIA GPU-based platforms in general, and the Jetson family in particular. The TYQ-i™ and FLK-i™ AI application platforms running on Jetson allow for high performance deployments for Industrial QA and Digital Adherence use cases.
