Over 70,000 Americans died from drug overdose in 2017, a number unthinkable in 1997 when this number stood at less that 17,000. In 2016 alone, over 1.6 million years of life were lost due to overdose driving an overall decrease US life expectancy [1,2]. Yearly over 500,000 overdosed patients present to the ED, nearly double the number of visits for ST elevation MI [3-5].

Epidemiology is the study and analysis of the distribution (who, when, and where) and determinants
of health and disease conditions in defined populations. It is the cornerstone of public health, and shapes policy decisions and evidence-based practice by identifying risk factors for disease and targets for preventive healthcare. Epidemiologists help with study design, collection, and...

Epidemiology - Wikipedia
While epidemiology is "the study of the distribution and determinants of states of health in populations", social epidemiology is "that branch of epidemiology concerned with the way that social structures, institutions, and relationships influence health." This research includes "both specific features of, and pathways by which, societal conditions affect health".
